

PFAS STATEMENT CERTIFICATE

Leach International Corporation is dedicated to providing high quality engineered products that are in conformance with the strict safety and reliability standards for military and aerospace applications. As a global leading manufacturer in electromechanical relays, contactors and power distribution systems, we are committed to reducing our global environmental impact and supporting the health and safety of our employees and within our communities.

Per- and polyfluoroalkyl substances – known as PFAS, specifically perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS), and their salts and structural isomers are perceived as a global environmental concern and are featured in many existing and developing environmentally driven requirements. PFOA, PFOS, their salts and related compounds, are already subject to specific regulatory restrictions in the United States and Europe.

Leach International Corporation thoroughly reviews all chemicals that are added into the bill of materials. No Leach International Corporation manufactured projects contain the short chain perfluoroalkyl substances: PFOA and PFOS, their salts and related compounds, at levels in excess of the current EU or TSCA limits for “Persistent Organic Pollutants”.

Certain Leach product families do employ per-fluoropolymer, or long chain, poly-fluoropolymer materials (e.g. PTFE, PVDF, PFA, FEP or fluoroelastomers) in their construction or processing. Leach is continually evaluating new materials on the marketplace and is investigating the development of new non-PFAS related alternatives that can meet our legacy of product performance and strict conformance to both military and aerospace requirements.
